

UHSM leads the way with Lorenzo & IDS

Introducing the New Generation of Healthcare Management

THE UNIVERSITY HOSPITAL OF SOUTH MANCHESTER NHS FOUNDATION TRUST IS THE UK'S FIRST MAJOR ACUTE CENTRE TO SUCCESSFULLY INSTALL LORENZO - THE NEXT-GENERATION IT SOFTWARE FOR HEALTHCARE INFORMATION MANAGEMENT.

The Foundation Trust, which operates Wythenshawe Hospital and also provides services at Withington Community Hospital, has always been committed to providing top quality healthcare services through involvement, initiative and innovation while continuing to develop as a leading research and teaching centre of excellence.

The Lorenzo Patient Administration System, which replaced the old IBA PAS, was initiated by Mark Blakeman, Director of Business Development and Informatics, and implemented by IT

solutions experts Intelligent Data Solutions (IDS). Mr. Blakeman, one of the youngest and most forward thinking Directors in the NHS, is committed to using technology for the good of patients and staff in an effective and easy to use way.

The project itself comprised two parts: Data Migration and Developing a Reporting Solution. To date, the results have been hugely successful. Clear planning, on time delivery and a smooth go-live process through IDS resulted in complete continuity from day one of go-live.

Technical Information

?????

Data Migration

One of the major obstacles of the project was transferring all the records from the existing IBA PAS on to the Lorenzo system. In order to overcome this, the Foundation Trust employed the services IDS, which offers unrivalled experience in accurate, on time and efficient Data Migration.

The two-way process between IDS and the Foundation Trust's staff allowed input at key stages with astounding results. Full go-live ensued in just two days with seamless integration between the two systems, which was carefully monitored round-the-clock by IDS' experienced employees.

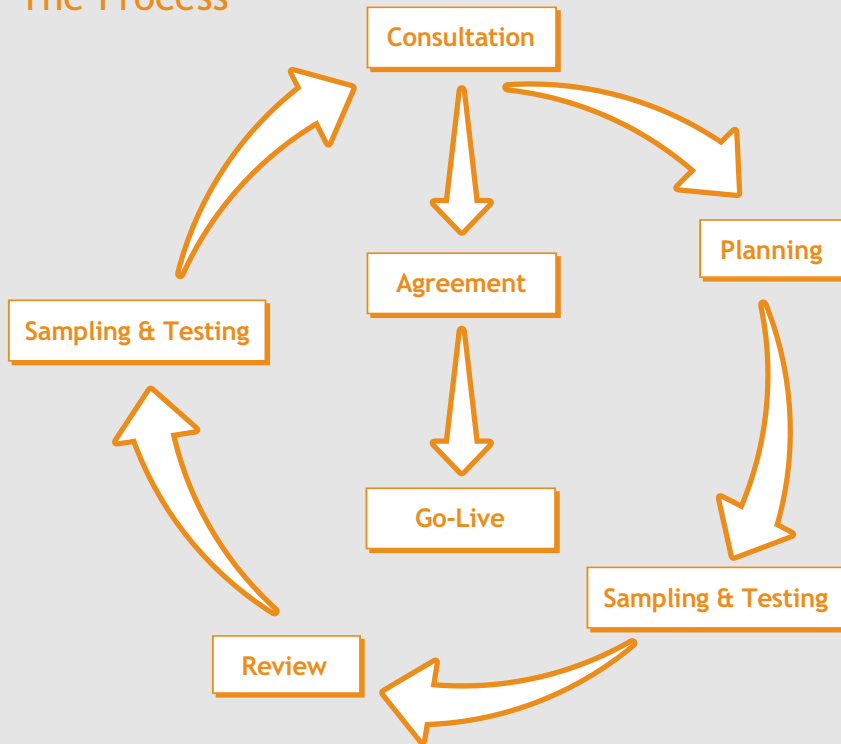

Reporting Solution

Another important aspect of IDS' expertise was in the development of a unique Reporting Solution. IDS created a system that allowed clear front-end access for staff to the data held by Lorenzo generic extracts.

In this way, it now ensures the Foundation Trust's reports adhere to statutory and adhoc requirements in a simple, meaningful way. The newly developed Reporting Solution has created a positive impact on all staff connected to the hospital.

The Process

The Results

The introduction of Lorenzo was a major change to the Foundation Trusts' core systems and had an impact on many staff. Aided by IDS' skills and experience, integration was a resounding success.

The accomplishment provides a benchmark for other Trusts and an example of best practice. Mr. Blakeman is delighted with the outcome: "IDS' knowledge of systems integration and transfer with Lorenzo, combined with unrivalled project management experience within the NHS, left me in no doubt about which company we should call upon to implement the system.

From beginning to end, they worked closely with myself and many other staff at the hospital to explain every aspect of the programme and ensure its very success. I could hand over the project with confidence and I am proud of the work my staff and I have been able to achieve in partnership with IDS."

Put your Trust in the hands of IDS

To find out more about how IDS can advise, support and implement Lorenzo into your Trust, call today on 01706 370 045.

One of our Sales Assistants can arrange a consultation with our Director at your convenience. We look forward to working with you.
